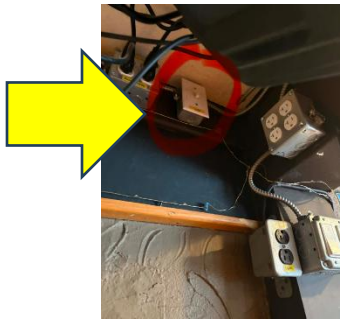
Roy's Towne Pub
SOUND SYSTEM INSTRUCTIONS

We recommend to set up in advance, be sure to do sound check.
Remember to let bartender or server know when you need overhead music off!

1. Make sure the faders are off or on low settings.
2. Turn on mixer first.
3. Turn on powered speakers. The switch is high on the wall right of the doorway (see photo). **<u>This also gives power!</u>**



The "switch" (circled in red) is by the post, and VERY high, near ceiling. This powers the stage area. Please turn on for use and turn off at end of night, following the instructions listed below.

4. Adjust the gains around 11:00.
5. The individual monitors (Aux.) are the two blue knobs on each channel. Do not go past 11:00.
6. The master monitors are on the far right, do not push them past 11:00.
7. **DO NOT TOUCH THE EQUILIZER RACKS.** They are set for the room.
8. When finished at the end of the night, turn off the powered speakers first, then the mixer.
9. **Trouble shooting:** if no sound out of speakers, check that the EQ racks are on, the power bar behind the mixer, on the floor, should be on.

TIPS & REMINDERS:

- Take a photo for reference of the sound board (before & after you adjust). Then, next time you play, you know exactly where to set your controls and you can return to original after your performance.
- No gum (yes, we actually have to say this as we've found gum on the walls).
- No duct tape (again, we've actually had issues and it damages the carpet & floor, we've already had to replace the stage carpet). For your convenience, we have rubber mats you can use to place over cords, if necessary. Please return to back wall (next to soundboard) when finished.
- Return curtains and all equipment to proper areas.
- You may use our cord/mic, just clean and return when finished.
- A copy of the instructions are on back wall, behind curtain for convenience.
